

DAILY ONLINE ACTIVITIES SUMMARY

Date:	19/05/2020		
Name of the Faculty	Shilpa		
No. of Students Allotted for monitoring	19		
Progress	Good		
Whether collected report from all the allotted students	12 submitted		
Online Test Summary			
Subject	OOC		
Semester	IV	Duration	15 min
No. of students Taken	84	Passing %	100
Certification Course Summary			
Course	Network Server Security - Protecting the Server and Client Computers		
Certificate Provider	Alison	Duration	2-3 Hours
Coding Challenges			
Problem Statement: -			
Status: -			
Uploaded the report in Github		No	
If yes Repository name		-	

Uploaded the report in slack

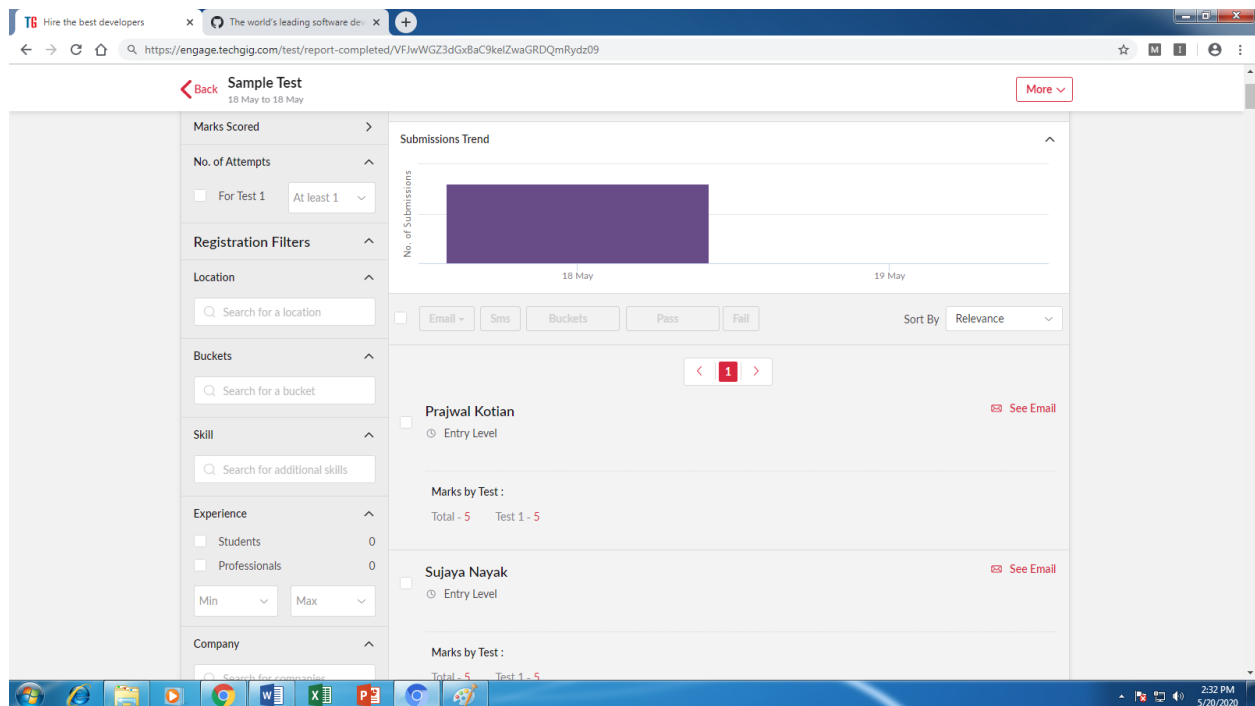

No

Online Test Details: (Attach the snapshot and briefly write the report for the same)

Certification Course Details: (Attach the snapshot and briefly write the report for the same)

Coding Challenges Details: (Attach the snapshot and briefly write the report for the same)

Online Test Summary

Certification Course Summary

There are 3 modules in the certification course, I completed 1 module.

Virtual Private Network (VPN)

- VPN (Virtual Private Network) is a technology that uses encrypted tunnels to create secure connections across public networks like the Internet.
- VPNs are commonly used by remote employees for access to the internal network, to create secure network to network connections for branch offices or business partner connections, or even to create secure host to host connections for additional security and isolation on an internal network.
- VPNs utilize encryption and authentication to provide confidentiality, integrity, and privacy protection for data.

Secure Your Computer Network Servers And Clients From External Threats, With This Free Network And Security Course.

MODULE 1 Complete

Understanding Network Security

In this module you will be introduced to firewalls in a computer system and/or network. You will learn about Open system interconnection model and its levels. You will learn about the different types of firewalls. You will learn about different network access methods and technologies to help secure them. You will learn about traps for hackers and isolating computer from the network with VLANs. You will learn about different protocols for securing communications within and outside the network.

Understanding Network Security - Learning Outcomes	Topic Completed
Firewalls	Topic Completed
Network Access And Isolation Protection	Topic Completed
Protocol And Wireless Network Security	Topic Completed
Understanding Network Security - Lesson Summary	Topic Completed

MODULE 2 Not Started

Protecting The Server And Client
